Introduced by Senator Escutia (Coauthor: Senator Kuehl)

(Coauthors: Assembly Members Chan, Koretz, and Pavley)

February 22, 2005

An act to add Section 104324.27 to the Health and Safety Code, relating to environmental health.

LEGISLATIVE COUNSEL'S DIGEST

SB 849, as amended, Escutia. Environmental health data tracking. Existing law establishes the Environmental Health Surveillance System through an interagency agreement between the State Department of Health Services, the California Environmental Protection Agency (Cal/EPA), and the University of California if authorized by the regents, for the purpose of, among other things, tracking and evaluating a variety of chronic diseases in relation to environmental exposures.

This bill would require, pursuant to that interagency agreement, the establishment of the Interagency Office of Environmental Health Tracking within the department's Division of Environmental and Occupational Disease Control for the purpose of implementing the California Health Tracking Program. The bill would require the department and the Cal/EPA to each provide one 50% time research scientist as staff for the new office. The bill would state the Legislature's intent to provide funding to the department and the Cal/EPA for those research scientist positions in the 2005-06 Budget Act. The bill would prescribe the office's objectives over a 3-year period and would require the office to complete certain duties for the 2005-06 fiscal year. The bill would require any additional funding for

 $SB 849 \qquad \qquad -2-$

the office, beyond funding that the Legislature may appropriate for the research scientists, to come from federal or private sources.

Vote: majority. Appropriation: no. Fiscal committee: yes. State-mandated local program: no.

The people of the State of California do enact as follows:

1 SECTION 1. The Legislature finds and declares all of the 2 following:

- (a) Chronic diseases and injuries account for 75 percent of all deaths in California.
- (b) The medical and income-loss costs of chronic diseases for the state in 2000 were estimated to be \$107 billion.
- (c) Researchers have strong scientific evidence showing that many of these diseases, including, but not limited to, respiratory illness, adverse pregnancy outcomes, cancer, and developmental disabilities, are associated with environmental exposures.
- (d) If preventable environmental hazards account for even 1 percent of the cost of all chronic diseases in California, action to identify and reduce these environmental exposures would save the state hundreds of millions of dollars per year.
- (e) The State of California has an inadequate ongoing surveillance system to describe trends in environmental hazards or exposures and environmentally related diseases, and inadequate resources to carry out special studies to explain the trends or to explore the policy implications of its findings.
- (f) Environmental surveillance systems are necessary to monitor the frequency and geographic distribution of these illnesses and exposures and to protect public health.
- (g) Ongoing surveillance of environmentally related diseases and priority environmental hazards should be the function and responsibility of the State of California.
- (h) There are multiple agencies in California that collect and manage health and environmental data, and those databases, which could be used for tracking, need to be updated and made uniform. However, there is a lack of systematic analysis of the data.
- (i) There needs to be a coordinating body that brings these agencies together and promotes collaboration and sets the priorities for updating these databases and systems. The cost to

-3- SB 849

integrate, coordinate, and analyze the data is only a fraction of the cost of collecting the data.

- (j) An interagency office of environmental health tracking should be established and staffed jointly by the State Department of Health Services and the California Environmental Protection Agency.
- 7 SEC. 2. Section 104324.27 is added to the Health and Safety 8 Code, immediately following Section 104324.25, to read:
 - 104324.27. (a) Pursuant to the memorandum of understanding set forth in Section 104324.25, the department and the California Environmental Protection Agency shall establish the Interagency Office of Environmental Health Tracking within the department's Division of Environmental and Occupational Disease Control for the purpose of implementing the California Health Tracking Program.
 - (b) As used in this chapter "office of health tracking" means the Interagency Office of Environmental Health Tracking established in subdivision (a).
 - (c) The department and the California Environmental Protection Agency shall both provide staff for the office of health tracking with one 50 percent time research scientist in the Environmental Health Investigations Branch of the department, and one 50 percent time research scientist in the Office of Environmental Health Hazard Assessment. The research scientists shall, among other things, assist local communities by providing technical assistance to obtain and interpret needed environmental health data.
 - (d) The objectives of the office of health tracking shall be to accomplish the following over a three-year period:
 - (1) Coordinate the multiple tracking data collection activities across various state agencies and work to promote access to priority databases in order to integrate data into the California Environmental Health Tracking System—which that is currently being developed with a planning grant from the federal Centers for Disease Control and Prevention.
 - (2) Oversee the implementation of the recommendations of the final report of the working group established pursuant to this chapter.

SB 849 —4—

1 2

 (3) Facilitate the dissemination of surveillance data to the public and researchers and provide technical assistance on how to interpret the data.

- (4) Develop data sharing agreements, and develop procedures to protect individual privacy.
- (5) Develop a strategic plan that would include a mission statement, critical issues, core priorities for research and surveillance, identification of internal and external stakeholders, and a work plan describing future program development.
- (6) Collate and analyze data, including, but not limited to, all of the following:
- (A) Identifying trends and geographic patterns of disease and environmental hazards or exposures.
- (B) Analyzing hazards, exposures, and diseases with relation to socioeconomic status, race, and ethnicity.
- (C) Provide baseline data and present descriptive information relevant to policy formation that are consistent with existing goals of the program.
- (7) Develop a strategic plan, in consultation with the Office of Environmental Health Hazard Assessment, for obtaining missing information on chemicals as necessary for analyzing significant environmental exposures and potentially damaging health and environmental effects, including reports from the National Academy of Sciences and other relevant studies.
- (8) Produce a report to the Legislature once every two years on the status of surveillance activities and related research programs.
- (e) The office of health tracking shall use the program's existing advisory bodies composed of members selected from impacted communities, local government, environmental advocacy groups, the regulated community, labor, and other nongovernmental organizations to review and comment on its findings, to provide input on future directions, to comment on the biennial report, and to ensure accountability to communities and the public.
- (f) Any additional funding for the office of health tracking, beyond funds that the Legislature may appropriate for the research scientists required by subdivision (c), shall come from federal or private sources.

5 SB 849

SEC. 3. For the 2005-06 fiscal year, the office of health tracking shall do all of the following:

- (a) Develop and sign cooperative agreements for data sharing between the office of health tracking, the Division of Chronic Disease and Injury Control in the department, and the boards, departments, and offices of the California Environmental Protection Agency. These agreements shall be modeled after the recent Memorandum of Understanding signed by the United States Environmental Protection Agency and the United States Department of Health and Human Services to coordinate collection of health and environmental data.
- (b) Develop a strategic plan that shall include (1) a mission statement, (2) identification of both critical issues and core priorities for research and surveillance and internal and external stakeholders, and (3) a work plan describing future program development.
- (c) Develop extramural proposals to seek federal and foundation funds to establish pilot tracking projects, fund additional staff positions, and develop solid cost estimates and proposals for a tracking function.
- SEC. 4. It is the Legislature's intent to provide funding to the State Department of Health Services and the California Environmental Protection Agency for the research scientist positions required by subdivision (c) of Section 104324.27, as added by this act, in the 2005-06 Budget Act.
